

BOD tester: measuring the water biological oxygen demand (cod)

Dual channel atomic fluorescence photometer: can detect a variety of elements

The dissolved oxygen meter: dissolved oxygen

Digital turbidity meter: liquid turbidity measurement

Atomic absorption spectrophotometer: according to the measured element treat radiation absorption and the ground state of atoms degree of quantitative analysis

Conductivity meter: determination of the solution quality solution conductivity value

Gas chromatograph: qualitative. Quantitative analysis

Multi-function infrared metering instrument: measuring the water content of oil

Carbon dioxide analyzer: analysis of carbon dioxide

Radioactivity measurement instrument, measuring the water radionuclides

Spectrophotometer: quantitative analysis
